Momentum Investments Target Factor Portfolio Range

Momentum Investments Target Factor 7 Portfolio

Factsheet at 30 June 2021

Target: CPI + 5% to 6%

Investment horizon: Seven years

Investments managed by: Momentum Outcome-based Solutions (Pty) Ltd

Momentum outcome-based investing philosophy

Investment success is about consistently maximising the probability of you achieving your investment goals – whether that is to preserve capital, generate an income stream in retirement or grow wealth within the parameters of a certain risk profile. In response to the ever-evolving investment landscape, we have constructed a range of outcome-based solutions that set their sights beyond mere benchmarks and instead focus on the things that matter the most to you – ensuring we maximise the probability of you achieving your investment goals. Outcome-based investing is about placing your goals at the centre of our investment process.

Investor profile and investment strategy

This portfolio is aimed at investors who are in the accumulation phase of investing. It has a long-term investment horizon and, therefore, the aim is to maintain an average exposure of 80% to growth asset classes (local and global equities and property). The portfolio range consists of passive, enhanced passive and smart beta investment strategies. The allocation between asset classes is actively managed, taking the market environment into account. Through the optimum selection of asset classes, the probability of achieving the outcome is maximised within acceptable risk parameters. It is suitable as a stand-alone portfolio in retirement products, where compliance with Regulation 28 is specifically required.

Portfolio information

Launch date:	August 2011
Benchmark:	Composite: Local equity 50%; Local property 5%; Local bond 10%; Local cash 7.5%; Global equity 22.5%; Global property 2.5%; Global bond 2.5%
Target:	Inflation plus 5% to 6% over seven-year rolling periods
Reg. 28 compliant:	Yes

Risk of capital loss	Very low	Medium	Very high
Investment term	Very short	Medium	Very long

Long-term outcomes

Return over the investment horizon

Portfolio
7.13%

Benchmark	CPI + 5%
6.59%	9.61%

The annualised return over the investment horizon of the portfolio.

Hit rate

Portfolio
44.44%

The percentage of times the portfolio achieved or exceeded CPI + 5% over rolling periods of the investment horizon.

Average shortfall

Portfolio
-2.12%

The average shortfall relative to CPI + 5% over rolling periods of the investment horizon.

Short-term risk

Risk of negative one-year return

Portfolio
12.96%

Benchmark	CPI + 5%
14.81%	0.00%

The likelihood of negative returns over any one-year rolling period.

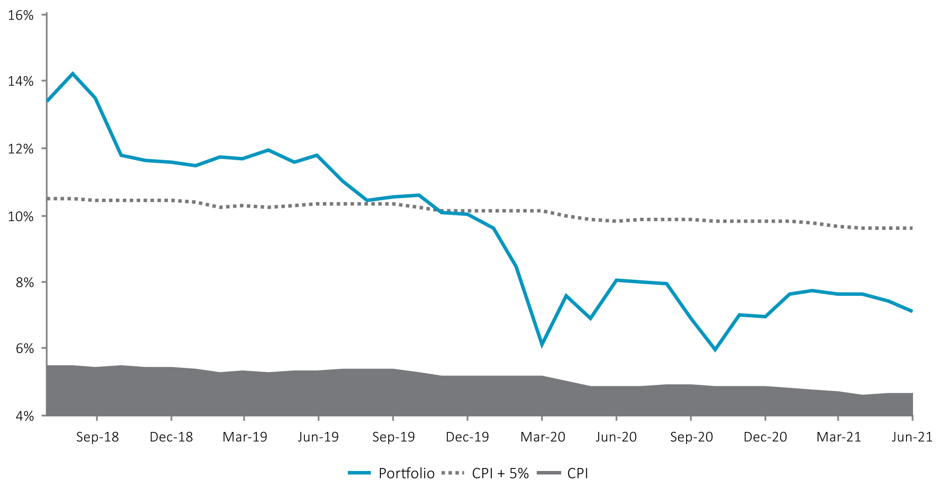
Minimum one-year returns

Portfolio
-8.21%

Benchmark	CPI + 5%
-10.63%	7.70%

The worst one-year return with a 95% likelihood.

Rolling returns over investment horizon



Returns over rolling periods of the investment horizon since launch.

The 10-largest instruments at 31 May 2021, looking through all asset classes held.

Quarterly portfolio commentary for Q2 2021

Developed market (DM) equities returned 7.9% (in US dollar terms) in the second quarter of 2021, emerging market (EM) equities 5.1% and global bonds 1%.

DM equities were supported by policy stimulus and increasing economic activity due to faster vaccinations against COVID-19, but new waves of COVID-19 in EMs dented their recoveries. Global growth of 6% is expected this year, moderating to 4.5% in 2022.

Global bonds were affected by rising global consumer price inflation (CPI), contributing to increasing nominal bond yields, suggesting earlier tightening of monetary policy. However, the pace of increase in commodity prices, which hurled global CPI higher, should slow next year, as demand growth slows and supply catches up.

Although the potential for equity market corrections is increasing, the fundamentals still support global equities to outperform global bonds. Low interest rates do not support exposure to global cash.

If South Africa’s adjusted level 4 lockdown is not extended even further, economic growth should surpass 4% in 2021. Risk on and prospects of a lower savings deficit supported the rand to a somewhat overvalued position by mid-2021. With CPI projected to increase to around 4.5% in the next two years, the repo rate is expected to increase twice in 2022, by 25 basis points each time.

On a forward P/E basis, the South African equity market trades at large discounts to EMs and DMs and justifies a preference within portfolios. SA bond yields remain attractive relative to those in DMs and EMs. Listed property fundamentals are weak, while SA real cash yields are close to zero.

The portfolio returned 2.5% for the quarter, which underperformed the benchmark of 2.8%. The allocation to local bonds and property contributed to the absolute returns, whereas the exposure to global bonds detracted from returns.

Notes

On 1 November 2020, the real return expectation for this portfolio was revised from inflation plus 7% to a range of inflation plus 5% to 6%.
Changes were made to the strategic asset allocations on 31 October 2020.
