Momentum outcome-based investing philosophy

Investment success is about consistently maximising the probability of you achieving your investment goals – whether that is to preserve capital, generate an income stream in retirement or grow wealth within the parameters of a certain risk profile. In response to the ever-evolving investment landscape, we have constructed a range of outcome-based solutions that set their sights beyond mere benchmarks and instead focus on the things that matter the most to you – ensuring we maximise the probability of you achieving your investment goals. Outcome-based investing is about placing your goals at the centre of our investment process.

Investor profile and investment strategy

This portfolio is aimed at investors who are in the accumulation phase of investing. It has a long-term investment horizon and, therefore, the aim is to maintain an average exposure of 80% to growth asset classes (local and global equities and property). The portfolio range consists of passive, enhanced passive and smart beta investment strategies. The allocation between asset classes is actively managed, taking the market environment into account. Through the optimum selection of asset classes, the probability of achieving the outcome is maximised within acceptable risk parameters. It is suitable as a stand-alone portfolio in retirement products, where compliance with Regulation 28 is specifically required.

Quarterly portfolio commentary for Q2 2021

Developed market (DM) equities returned 7.9% (in US dollar terms) in the second quarter of 2021, emerging market (EM) equities 5.1% and global bonds 1%.

DM equities were supported by policy stimulus and increasing economic activity due to faster vaccinations against COVID-19, but new waves of COVID-19 in EMs dented their recoveries. Global growth of 6% is expected this year, moderating to 4.5% in 2022.

Global bonds were affected by rising global consumer price inflation (CPI), contributing to increasing nominal bond yields, suggesting earlier tightening of monetary policy. However, the pace of increase in commodity prices, which hurled global CPI higher, should slow next year, as demand growth slows and supply catches up.

Although the potential for equity market corrections is increasing, the fundamentals still support global equities to outperform global bonds. Low interest rates do not support exposure to global cash.

If South Africa's adjusted level 4 lockdown is not extended even further, economic growth should surpass 4% in 2021. Risk on and prospects of a lower savings deficit supported the rand to a somewhat overvalued position by mid-2021. With CPI projected to increase to around 4.5% in the next two years, the repo rate is expected to increase twice in 2022, by 25 basis points each time.

On a forward P/E basis, the South African equity market trades at large discounts to EMs and DMs and justifies a preference within portfolios. SA bond yields remain attractive relative to those in DMs and EMs. Listed property fundamentals are weak, while SA real cash yields are close to zero.

The portfolio returned 2.5% for the quarter, which underperformed the benchmark of 2.8%. The allocation to local bonds and property contributed to the absolute returns, whereas the exposure to global bonds detracted from returns.

Notes

On 1 November 2020, the real return expectation for this portfolio was revised from inflation plus 7% to a range of inflation plus 5% to 6%. Changes were made to the strategic asset allocations on 31 October 2020.
