#### Momentum Investments Enhanced Factor 5 Portfolio

Factsheet at 30 November 2020

**Target:** CPI + 3% to 4%

**Investment horizon:** Five years

**Investments managed by:** Momentum Outcome-based Solutions (Pty) Ltd

#### 📄 Momentum outcome-based investing philosophy

Investment success is about consistently maximising the probability of you achieving your investment goals – whether that is to preserve capital, generate an income stream in retirement or grow wealth within the parameters of a certain risk profile. In response to the ever-evolving investment landscape, we have constructed a range of outcome-based solutions that set their sights beyond mere benchmarks and instead focus on the things that matter the most to you – ensuring we maximise the probability of you achieving your investment goals. Outcome-based investing is about placing your goals at the centre of our investment process.

#### 📄 Investor profile and investment strategy

This portfolio is aimed at investors who are in the consolidation phase of investing. It has a medium- to long-term investment horizon and, therefore, the aim is to maintain an average exposure of 55% to growth asset classes (local and global equities and property). The remaining exposure is to asset classes that should preserve the purchasing power of the capital accumulated. The allocations between asset classes are actively managed, taking the market environment into account. The portfolio consists of the full universe of asset classes, including global investments of up to 30% (excluding Africa), and alternative investments. Through the optimum selection of asset classes the probability of achieving the outcome is maximised within acceptable risk parameters. Performance fees may be paid within investment mandates, should they sufficiently enhance investment returns after fees. It is suitable as a stand-alone portfolio in retirement products, where compliance with Regulation 28 is specifically required.

## Quarterly portfolio commentary for Q3 2020

High-frequency data releases and sentiment indicators indicate that a strong bounce back in global economic activity in the third quarter of the year may fizzle out prematurely. The recovery has shown signs of being unbalanced. Businesses have become less pessimistic about the outlook for the economy and corporate earnings, whereas consumer behaviour appears to continue to reflect the uncertainty of COVID-19. Ongoing stimulus is likely necessary to support financial markets and underpin confidence for sustained economic growth. With the blurring of fiscal and monetary policy, it is not clear what will force governments to rein in spending. This raises an additional concern of central banks becoming more vulnerable to political interference. Moreover, inflation expectations are also at risk of becoming unanchored down the line. Even as further restrictions are lifted on the local economy, electricity shortages, policy uncertainty, lingering unemployment, an anticipated rise in bankruptcies, a slow pace of reform and soaring government debt will continue to restrain spending and investment, thereby limiting South Africa's recovery to a below-consensus 2.0% in 2021, in our view, from a contraction of around 8.0% in 2020.

The portfolio returned 1.67% for the quarter, which outperformed the benchmark of negative 0.21%. Being overweight global and local equity contributed to the relative returns, while being underweight local inflation-link bonds detracted from returns.

## Notes

On 1 November 2020, the real return expectation for this portfolio was revised from inflation plus 5% to a range of inflation plus 3% to 4%. Changes were made to the strategic asset allocations on 31 October 2020.
